One Week Faculty Development Program On

Microcontrollers and Embedded system (Features and Applications)

June 19-June 23, 2018

Sponsored by

TEQIP-III

A.P.J. Abdul Kalam Technical University

Organized by

**Department of Electronics Engineering
Rajkiya Engineering College, Kannauj
Kannauj-209732**

ABOUT THE INSTITUTION:

Rajkiya Engineering College, Kannauj (RECK) is an Institute with total commitment to quality and excellence in academics. It was established by the Government of Uttar Pradesh in the year 2015. The college is affiliated to Dr. A. P. J. Abdul Kalam Technical University, Lucknow (Formerly Uttar Pradesh Technical University, Lucknow). The college offers four full time courses namely Electrical Engineering, Electronics Engineering, Civil Engineering and Computer Science & Engineering with the aim of equipping the young talents with professional education and to confer sufficient knowledge upon them to meet the demand and challenges of the volatile global environment.

ABOUT THE DEPARTMENT:

The Department has dedicated faculty members for taking care of academic and other requirements of the students. It offers B. Tech. in Electronics Engineering. The Department is having well equipped labs and software for Virtual Instrumentation, PCB Design, Signal Processing, Digital electronics lab. Various extracurricular activities are regularly organized by the students under the aegis of Association of Electronics Engineers for their overall development. The Faculty members of the Department are continuously involved in R & D activities with their research students. Several National Level Seminars, Conferences, Faculty Development Programs, Expert Lectures, Workshops etc. have been organized by the Department.

COURSE DESCRIPTION:

The FDP aims at exposing the participants to the world of microcontrollers. Starting from basic microcontrollers to very much popular 8 bit (8051 family of) microcontrollers to more complex and advanced 16 bit microcontroller. This will help them to correlate with the advancement in the embedded systems. Earlier embedded systems were based on 8 bit microcontrollers but currently embedded designs have become very complex. Therefore there is a need to learn the concepts of microcontrollers and their applications. The FDP is also intended in developing basic programming skills for building microcontroller applications.

OBJECTIVE OF THIS COURSE:

The objectives of TEQIP-III sponsored One week faculty development program are:

- ❑ Familiarization with different components of microcontroller and their interactions used today to build embedded systems.
- ❑ Create awareness about different type of microcontrollers for a particular application.
- ❑ Provide experience in programming to develop embedded systems
- ❑ Familiarize with different applications based on microcontroller.
